Use Case Diagram - Paint Manufacturing Station

Note: HMI Project done using SIEMENS WinCC Advanced Software v17

Engineer

An Engineer is responsible for system monitoring, diagnostics, and user management. They can view system statuses, logs, alarms, and batch data but cannot directly control

Administrator

An Administrator has full system access and privileges. They manage users, configure system settings, control all operational

Operator

An Operator interacts with the system to control and monitor processes in real time. They can switch between manual and auto modes, adjust operational parameters, control valves and motors, and acknowledge alarms, ensuring smooth plant operations.
